SUMMARY

Frontend engineer with 12 years of experience, now Team Lead at Rebilly (payments infrastructure), where my team owns identity, access and account features across the stack. I build shared UI foundations in Vue, Svelte and TypeScript: component libraries, large TypeScript migrations, white-label theming, and the tooling around them. Production backend experience in PHP/Symfony means I can own a feature from the API spec to the UI.

SKILLS

Frontend: TypeScript, JavaScript, Vue 3, Pinia, Svelte, HTML, CSS, Tailwind, PWA, WebSockets

Tooling: Nx monorepos, pnpm, Vitest, OpenAPI code generation, GitHub Actions, Renovate, Jenkins, Datadog

AI-assisted development: Claude Code (primary) and Cursor; scoping work for agents, reviewing and testing generated code before it ships

Backend: PHP (Symfony, Doctrine), MySQL, PostgreSQL, Redis, REST APIs, OIDC (Keycloak, Better Auth), Go

EXPERIENCE

Team Lead @Rebilly **(Remote)** — Sep 2026 - Present

- Lead the team that owns identity and accounts across backend and frontend: organizations, sign-in, users and memberships, ACL and roles, API keys, custom fields, tags, email and dependency management.
- Moved sign-in from **Keycloak** to **Better Auth** in about a week.
- Shipped API key expiration end to end, from enforcement at authentication to a dashboard UI with GitHub-style presets, reminder emails and an unused-key report.

Senior Software Engineer @Rebilly **(Remote)** — 2022 - Sep 2026

- Drove frontend modernization: migrated the shared **Vue** component library (about 26k lines) and FramePay to **TypeScript**, replaced heavy dependencies, and moved test suites to **Vitest**.
- Built a shared permissions editor component in **Vue** with grouped permissions, search and role templates, its catalog generated from the **OpenAPI** spec.
- Built organization IP allowlists end to end: API spec, SDK, dashboard security page, a shared error interceptor and public docs.
- Built white-label hosted login pages with **Keycloakify** and **Svelte 5**, themed per merchant with no code changes.
- Built **Keycloak** support in the core backend and dashboard, including registration settings synced to realms through the admin API.
- Built a **TypeScript** SDK generator from the OpenAPI spec, and dashboard features including an automated blocklist and risk score simulation reports.

Front End Engineer @Flightradar24 **(Remote)** — 2021 - 2022

- Helped design and build the architecture of the new Flightradar24 website in **Vue.js**, **TypeScript** and **Tailwind**.
- Designed and shipped new product features.

Front End Team Lead @FortuneJack — 2019 - 2021

- Designed the architecture of the new fortunejack.com and led its frontend development.
- Built a backend-driven template system that let the team change page UI without a developer.
- Added real-time updates for user events over **WebSockets**.
- Introduced **Git-flow** for releases and cleaned up the legacy CSS and JavaScript on the old site.
- Wrote internal APIs in **Go** and **PHP** and standardized existing endpoints as REST.

Front End Team Lead @Livo — 2019 (6 months)

- Led five frontend developers building a real estate platform for a subsidiary of Georgia's largest bank, plus internal tools for its support and call center teams.

Front End Engineer @FortuneJack — 2018 - 2019 (7 months)

- Finished the mobile version of fortunejack.com and turned the site into a **PWA**.

Front End Developer @Betsson Group **(Europebet)** 2018 - 2019 (7 months)

- Built a reusable lobby component library shared by all of Europebet's PvP games (Backgammon, Bura, Keno).
- Built the rendering library used to draw those games in the browser.

Full Stack Developer @Proservice 2015 - 2017

- Built web applications for clients and moved the company's in-house CMS to **Vue.js**.

Full Stack Developer @Absolute 2014 - 2015

- Built a complete food delivery platform, similar to Wolt or Glovo.

PART-TIME AND FREELANCE

Front End Consultant (Part-time) @Connect 2019 - 2021

- Helped the team adopt **Vue.js** and modern CSS methodologies, improved page speed on existing projects, and built the frontend of a new CMS in Vue.js.

Trainer @Mziuri 2019 - 2021

- Mentored several cohorts through a web development bootcamp.

Freelance

- Built and launched 15+ client projects over 12 years.
